FAIR DEAL PROPERTIES LTD

fdealproperties.com

Date: October 2026
Ref: FDP-IT-EMAIL-01

Email Setup Guide

Options & Instructions for Setting Up `@fdealproperties.com` Business Email

> **Why this is needed:** The Fair Deal Properties website automatically sends notifications to the firm whenever a client submits a form, requests an inspection, files a Data Subject Request (DSR), or subscribes to alerts. For these notifications to reach the firm's inbox, a working email address on the domain `fdealproperties.com` must be set up and connected to the website.

Email Addresses Required

Email Address	Purpose
`info@fdealproperties.com`	General enquiries, contact forms, newsletters, listing alerts
`inspections@fdealproperties.com`	Inspection request notifications
`dpo@fdealproperties.com`	Data Subject Requests — legally required under NDPA 2023
`no-reply@fdealproperties.com`	Outbound sender (the website sends emails *from* this address)

Option A — Whogohost (Your Domain Registrar)

FREE **Whogohost cPanel Email Hosting** ⭐ Check This First

Cost: Free — included in most Whogohost hosting plans

Since `fdealproperties.com` is registered with **Whogohost**, the firm may already have free email hosting included — depending on whether a hosting plan was purchased alongside the domain.

Steps

1. Go to **whogohost.com** and log in to the account used to buy the domain.
2. From the dashboard, look for **"cPanel"** or **"Manage Hosting"** next to `fdealproperties.com`.
   - **If cPanel is available** → the hosting plan includes email. Proceed to step 3.
   - **If only "Manage Domain" is available** → only the domain was purchased, no hosting. Skip to Option C (Zoho Mail).
3. Inside cPanel, click **"Email Accounts"**.
4. Create the four email addresses listed in the table above.
5. After creating them, find the SMTP settings (usually: Host: `mail.fdealproperties.com`, Port: `465` or `587`).
6. Share the SMTP credentials *securely* with the developer.

✅ **PROS**

- Completely free
- No new accounts to create
- Real inbox you can log in to

❌ **CONS**

- Only available if a hosting plan (not just a domain) was purchased
- Whogohost webmail interface is basic

Option B — Google Workspace (Gmail for Business)

PAID

Google Workspace — Gmail on Your Domain

Cost: $6 USD/user/month (~₦9,000/month) · 14-day free trial

Google Workspace gives the firm professional Gmail inboxes using their own domain — e.g. `info@fdealproperties.com` — with the full familiar Gmail interface.

Steps

1. Go to **workspace.google.com** and click "Get Started".
2. Enter the business name, select **"I have a domain"** → type `fdealproperties.com`.
3. Create the admin account (e.g. `info@fdealproperties.com`).
4. Google will provide a **TXT record** to verify domain ownership. Log in to Whogohost → DNS Management → add the TXT record. Takes about 5–10 minutes.
5. Google will then provide **MX records**. Add these to Whogohost DNS. (The developer can handle steps 4 and 5.)
6. Wait up to 24 hours for DNS to propagate. All `@fdealproperties.com` emails will then flow through Gmail.
7. Share API credentials or an App Password with the developer to connect the website.

✅ PROS

- Familiar Gmail interface
- Works on all devices
- Excellent spam filtering
- Best long-term option

❌ CONS

- Monthly cost ($6/user)
- Requires DNS changes on Whogohost

Option C — Zoho Mail (Free Business Email Inbox)

FREE **Zoho Mail — Free Professional Inbox** ⭐ Best Free Alternative

Cost: Free for up to 5 users, 5 GB per mailbox

Zoho Mail provides a free, professional inbox with a web interface — similar to Gmail — for custom domains. This is the best free option if Whogohost cPanel is not available.

Steps

1. Go to **zoho.com/mail** and click "Sign Up For Free".
2. Select **"Zoho Mail Lite — Free Plan"**.
3. Enter `fdealproperties.com` as the domain.
4. Zoho will ask to verify the domain — this requires adding a TXT record on Whogohost. (The developer can handle this — takes about 10 minutes.)
5. Add MX records to Whogohost DNS as provided by Zoho. (The developer handles this.)
6. Create the email accounts: `info@`, `dpo@`, `inspections@`, `no-reply@fdealproperties.com`.
7. Share SMTP credentials securely with the developer.

✅ **PROS**

- Completely free
- Real inbox — log in via web or app
- Supports website SMTP integration
- Up to 5 users free

❌ **CONS**

- Not as polished as Gmail
- Requires DNS changes on Whogohost

Option D — Resend (Website Notifications Only)

FREE **Resend — Automated Email Sending Service** Developer Handles This

Cost: Free — 3,000 emails/month · No inbox provided

Important: Resend does *not* provide an inbox. It only sends automated emails *from* the website. The firm still needs a separate inbox (Option A, B, or C) to *receive* those emails.

The developer will set up Resend to handle the website's outbound email sending. The firm only needs to confirm which inbox address they want notifications delivered to.

What the Company Needs to Do

1. Confirm the inbox address where website notifications should arrive (e.g. `info@fdealproperties.com`).
2. Grant the developer permission to add DNS records to `fdealproperties.com` on Whogohost (3 small records, takes 10 minutes).
3. The developer handles everything else.

Option E — AWS Simple Email Service (SES)

FREE / ~FREE **Amazon Web Services — SES** Developer Handles This

Cost: Free (62,000 emails/month on AWS) or $0.10 per 1,000 emails

Amazon AWS offers a highly reliable email sending service. Like Resend, it handles outbound automated emails from the website — **not** a personal inbox. This is the most technical option and is handled entirely by the developer.

What the Company Needs to Do

1. Either create a free AWS account at **aws.amazon.com** and share access credentials with the developer, **OR** simply ask the developer to use their own AWS account.
2. Grant DNS access on Whogohost for domain verification.

✅ PROS

- Extremely reliable
- Effectively free at any realistic volume
- Used by major corporations worldwide

❌ CONS

- Most technical option
- No inbox — sending only
- Requires AWS account setup

Summary Comparison

Option	Cost	Provides Inbox?	Difficulty	Best For
A — Whogohost cPanel	Free (if hosting plan exists)	✅ Yes	Low	Check this first
B — Google Workspace	$6/user/month	✅ Yes (Gmail)	Medium	Best long-term
C — Zoho Mail	Free (5 users)	✅ Yes	Medium	Best free inbox
D — Resend	Free (3,000/month)	❌ No (send only)	Low (developer)	Website notifications
E — AWS SES	Free / ~free	❌ No (send only)	High (developer)	AWS-hosted setups

⭐ Recommended Path

1. **Today (5 minutes):** Log in to Whogohost and check whether a hosting plan (cPanel) exists for `fdealproperties.com`. If yes, Option A is free and immediate — no new accounts needed.
2. **If no cPanel:** Sign up for **Zoho Mail** (Option C) — free, provides real inboxes, and the developer can connect the website to it within one day.
3. **If the firm prefers Gmail:** Purchase **Google Workspace** (Option B) at $6/month per user. Best long-term experience — familiar interface, mobile apps, excellent reliability.
4. **Regardless of inbox choice:** The developer will implement **Resend** (Option D) as the website's outbound sending engine — free, takes approximately one hour to configure.

Information the Developer Needs from the Company

Once an option is chosen, please ensure the following information is available for the technical setup:

- ☐ Chosen email option (A, B, C, D, or E)

- ☐ Login access to Whogohost (for DNS record changes) — *or* permission for the developer to handle DNS on the firm's behalf
- ☐ SMTP host, port, username and password (if Option A or C is chosen) — sent securely, not via WhatsApp or open email
- ☐ Preferred inbox for general enquiries (e.g. `info@fdealproperties.com`)
- ☐ Preferred inbox for Data Subject Requests / Data Protection matters (e.g. `dpo@fdealproperties.com`)
- ☐ Preferred inbox for inspection requests (e.g. `inspections@fdealproperties.com`)
